Continuation of 11. does NOT place the application in condition for allowance because: With regards to the rejection of claims 1, 6, and 11, Applicant has argued that the cited references fail to disclose rings which are positioned and adapted to create water droplets form water as the exhaust gases and the water exit the combustion engine. In the rejection for each of these respective claims, the examiner has relied on ring structures (Jorg Alexnat: Fig. 1, No. 19, Fig. 3, Nos. 57 and 58; Davey: Fig. 1, Nos. 25 and 26; Bishop: Fig. 3, Nos. 16 and 18) in the respective references to meet this limitation. In each of those cases, the reference discloses a ring structure exposed to exhaust flow that would be capable of creating water droplets from water in the exhaust gas. The examiner contends that a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim.
